PROFESSIONAL SUMMARY

Software Engineering Student at Wachemo University with practical experience in full-stack web development, Java backends, network simulation, and software quality assurance. Skilled in building responsive frontend interfaces using modern JavaScript (ES6+), designing relational MySQL databases, and simulating network topologies in Cisco Packet Tracer. Seeking a Software Engineering Internship to apply full-stack development and testing skills to real-world projects.

Education

Wachemo University — *B.Sc. in Software Engineering*

Expected Graduation: [February, 2028]

Relevant Coursework: Web Development, Database Management Systems, Software Testing & Quality Assurance, Object-Oriented Programming (Java/C++), System Architecture, Data Structures & Algorithms, Networking, AI and Mobile android application.

Technical Skills

- **Programming Languages:** JavaScript (ES6+), Java, C++, SQL, HTML5, CSS3
- **Frontend Development:** Responsive Web Design, DOM Manipulation, CSS Flexbox & Grid, Modern UI Layouts
- **Backend & Databases:** Java Servlets, Apache Tomcat, MySQL, Relational Database Design
- **Networking & Infrastructure:** Computer Networks, Network Configuration & Simulation (Cisco Packet Tracer), TCP/IP protocols

- Tools & Methodologies: Git, GitHub, Jira, ProjectLibre, Linux CLI / PowerShell, Agile/Scrum Principles, Software Testing (Black-Box & White-Box)

Projects

Community Incident Report Website | *Java, Servlet, Apache Tomcat, MySQL.*

Designed and built a dynamic web application allowing community members to submit, track, and manage local incident reports.

Developed backend server components using Java Servlets and integrated MySQL for persistence and data management.

Structured relational database schemas and wrote optimized SQL queries to manage incident submission records.

Online Food Ordering System | *HTML5, CSS3, JavaScript (ES6+)*

Built a responsive web application featuring interactive food menu navigation, real-time item selection, and cart state tracking.

Utilized vanilla JavaScript and DOM Manipulation to deliver a fluid user experience without external heavy libraries.

Deployed the live client interface using GitHub Pages for immediate accessibility and demonstration.

Key Academic & Practical Experience

Software Engineering & Network Simulation Projects | Wachemo University

- Configured and simulated LAN topologies, router/switch configurations, and IP addressing schemes using Cisco Packet Tracer.
- Planned project timelines, tasks, and resource allocations using Jira and ProjectLibre for agile development workflows.
- Conducted black-box and white-box functional testing on web portals, identifying UI defects and authoring comprehensive test cases and defect reports.
